GTH AI

A GTH Consulting Company

Your Partner in Public Sector AI Transformation

We understand the demands placed on public sector leaders to serve smarter, faster, and more fairly—often without added resources. That's why our AI consulting services are built for real-world implementation, helping you pinpoint high-impact opportunities, strengthen internal capabilities, and adopt AI in a way that's both responsible and sustainable.

At the core of our offering is a comprehensive, government-specific **AI Readiness Assessment and Action Plan**. This service is designed to help state and local governments realize the full value of artificial intelligence by identifying where AI can reduce costs, improve operations, and enhance service delivery—all while staying aligned with legal, ethical, and policy standards. A key part of our approach is workforce education at every level—leadership, staff, and technical teams—so your organization can confidently govern and apply AI for long-term impact.

With our team of trusted consultants, you will receive:

Literacy and Workforce Education

Customized workshops and training sessions equip leadership, staff, and technical teams with a solid understanding of AI fundamentals, governance, ethics, and practical public sector applications. Content is tailored to match your organization's operational context and level of technical maturity.

Readiness Audit and Deployment Plan

An in-depth evaluation of your agency's workflows, systems, data usage, and operational challenges to assess AI readiness. This assessment highlights high-impact opportunities where AI can streamline processes, lower costs, and enhance public service delivery.

Tailored Solutions

- **Data-Aware Interfaces:** We create lightweight, customized AI interfaces—such as Custom GPTs or NotebookLM notebooks—that are trained on your internal documents, policies, and workflows.
- **No App Development Required:** These tools are not new applications or platforms. They are configured using secure, off-the-shelf AI models tailored to your organization's knowledge base.
- **Expert-on-Demand Capability:** Staff can interact with these tools to ask questions, generate content, or perform analysis using the agency's own documentation, saving time and increasing accuracy.

Responsible AI and Governance

Development of internal AI use and governance policies that align with state and local regulations, as well as broader responsible AI frameworks. We emphasize promoting transparency, fairness, data privacy, and compliance throughout procurement and implementation processes.

Law and Policy Considerations

Comprehensive review of emerging AI legal frameworks and policies both domestically and internationally, with ongoing monitoring of legislative and regulatory trends.

General AI Consulting and Guidance

On-demand AI expertise to support your agency's evolving needs. Includes strategic recommendations on where custom tools can be developed and deployed to boost efficiency or enhance services by leveraging existing resources.

With the right guidance, your agency can start delivering real value from AI, without new infrastructure, massive hiring, or risky experimentation. Our consulting approach is built for action, not theory. Let's work together to build smarter services, empower your workforce, and lead with confidence in the age of AI.
